## Research Experience

Associate Professor, July 2014 to present. (Assistant Professor, July 2008 to June 2014).

Department of Management Sciences, University of Waterloo.

- Introduced time-biased gain (TBG) with Charles Clarke [14]<sup>1</sup> (SIGIR Best Paper). TBG produces validated predictions of human performance for information retrieval systems.
- Created a stochastic simulation of time-biased gain that estimates a user population's distribution of gain on a per-topic basis. With these distributions we can measure the effect-size of improvements and better understand the value of the improvements [12, 35].
- Demonstrated that retrieval precision does significantly affect user performance, and that the better the match between retrieval metric and user interface, the better the metric predicts user performance [15].
- With collaborators, showed the impact of spam on web retrieval and developed an efficient and effective means to detect and remove spam to improve retrieval quality [1].

Visiting Researcher, Microsoft Research, Redmond, WA. May 2015 to August 2015.

- Modeled user behavior on the Bing search results page in collaboration with Ryen White, Sue Dumais, and Paul Bennet.

Graduate Research Assistant, Center for Intelligent Information Retrieval, University of Massachusetts Amherst. Advisor: James Allan. August 2003 to June 2008.

- Studied find-similar (“more like this” or “related articles”) and found it to have the potential to match the performance of multiple item relevance feedback [19].
- Studied statistical significance tests for information retrieval evaluation and showed that researchers should be careful in their use of the Wilcoxon and sign tests [17].

Undergraduate, Iowa State University, Ames, Iowa, 1993-1995, and Graduate Research Assistant, Los Alamos National Lab’s Center for Nonlinear Studies, Los Alamos, New Mexico, summer 1994.

- Discovered and analyzed social networks in a system that modeled social choice and refusal [2, 21, 84]. Studied the effect of population structures on genetic algorithms [20].
